

A guided tour of the platform

Every screen a student or a teacher sees, in the order they meet it, with one line on what each is for.

Live at axilearn.vercel.app **Prepared by** Nasr **For** Axilog

AxiLearn is a bilingual learning platform for teenagers. Lessons are read in the browser, the code inside them runs in the browser, and nothing needs installing — a student with a PC and a link can start immediately.

The screens below are grouped by who uses them: the student side first, then the teaching side.

CHALLENGES

FOR THE STUDENT

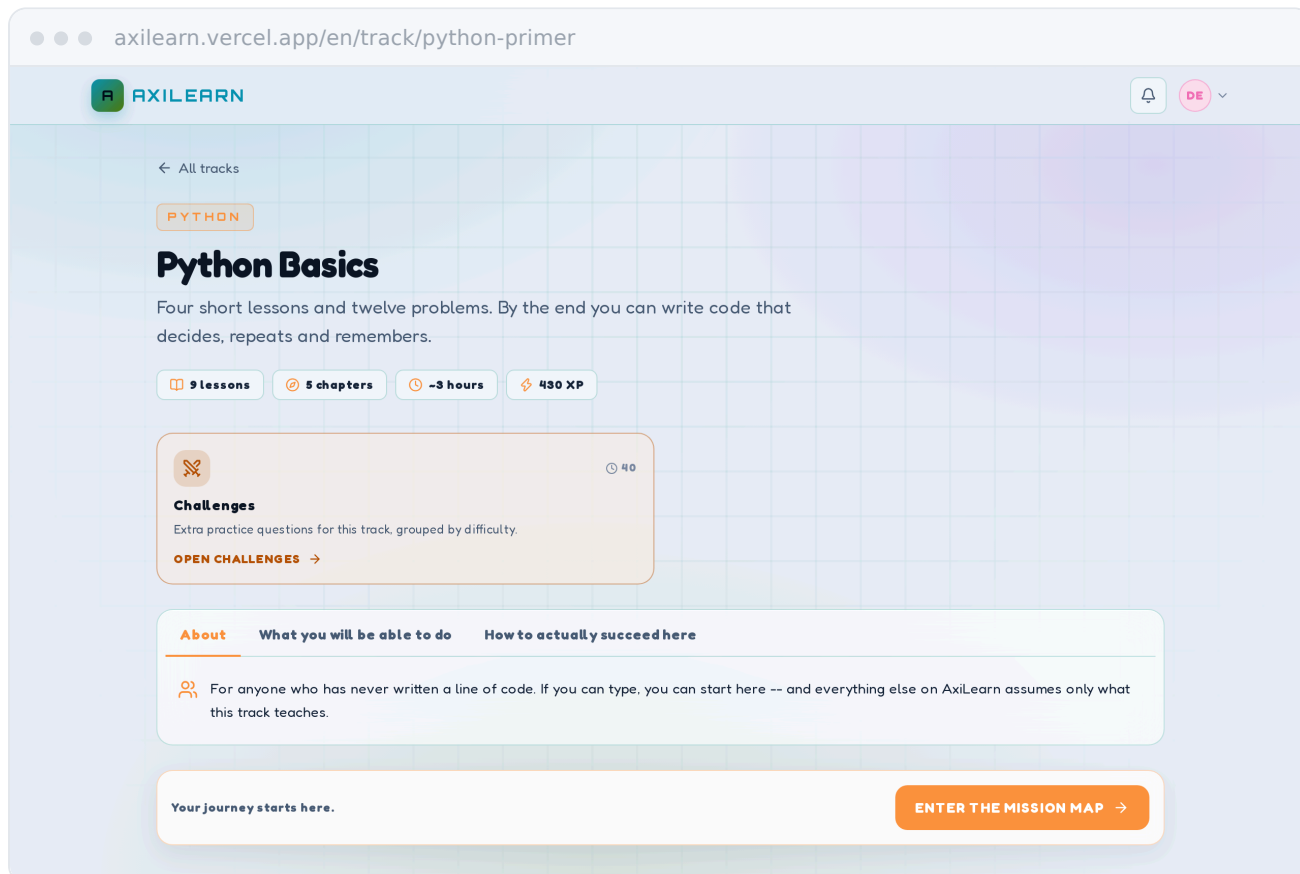

From signing in to handing work back.

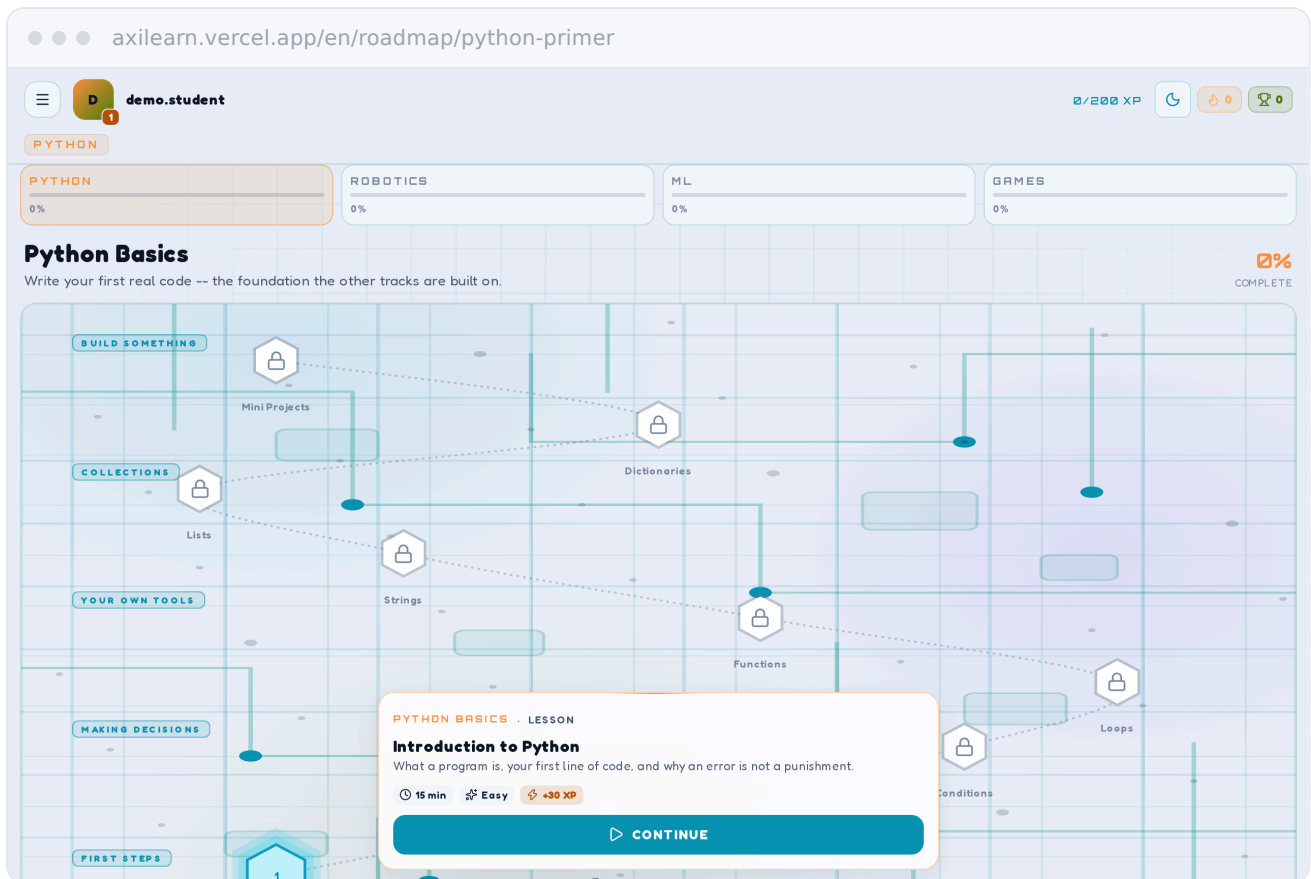

- 1 **Signing in** — Email or Google, in English or French.

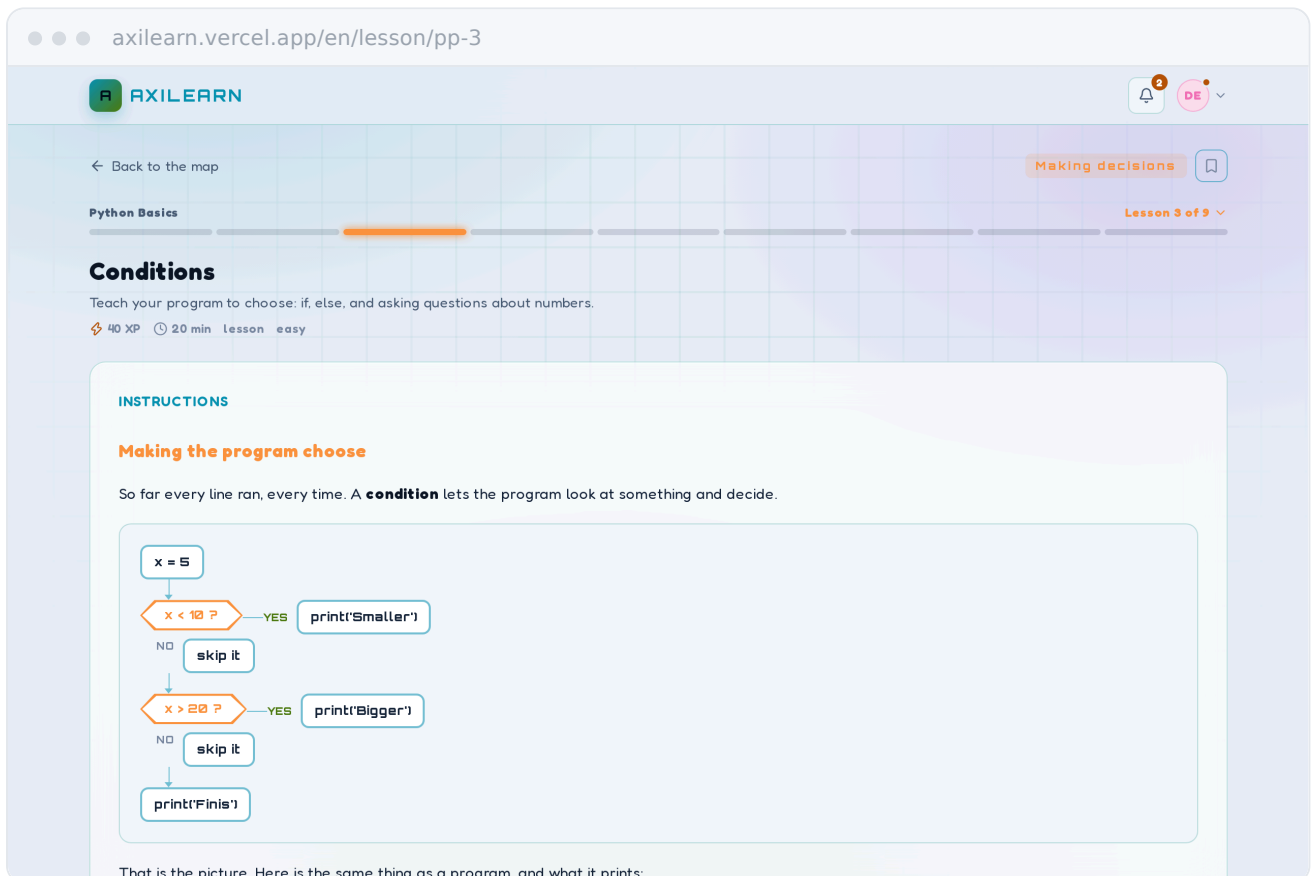

- Home — choose a track** — The four tracks, each showing progress, challenges and certificate at a glance.

- Track briefing** — What the track teaches, who it is for, and how to succeed — before committing to it.

- 4 **The mission map** — Every chapter as a node; finished ones cleared, the next one open, the rest locked.

- 5 **A lesson** — Reading, diagrams and code the student can run and edit without leaving the page.

PYTHON

Lesson 4 of 9

Loops

Do something ten times without typing it ten times.

40 XP 20 min lesson easy

INSTRUCTIONS

Doing something again

You want to print five numbers. You could write five lines. Now imagine a hundred numbers. A **loop** does the same thing over and over without you typing it over and over.

```

graph TD
    A[n = 5] --> B{n > 0?}
    B -- YES --> C[print(n)  
n = n - 1]
    C --> B
    B -- NO --> D[leave the loop]
    D --> E[print('Blastoff!')]
  
```

Follow the arrows: while the answer is **Yes** it goes round again. The moment it is **No**, it leaves the loop and carries on.

6 Diagram and output — A flowchart of the logic, then the same program with what it prints.

axilearn.vercel.app/en/lesson/pp-3

AXILEARN

WORKSPACE

```

1 # Change the distance and run it again.
2 distance = 15
3
4 if distance < 20:
5     print("Too close -- stop!")
6 else:
7     print("Clear ahead.")
8
  
```

LOADING PYTHON... (first time only, it is then cached)

RUN

RESULT

Press Run to see what your code does.

QUICK CHECK

1. In an "if", what does the indentation do?

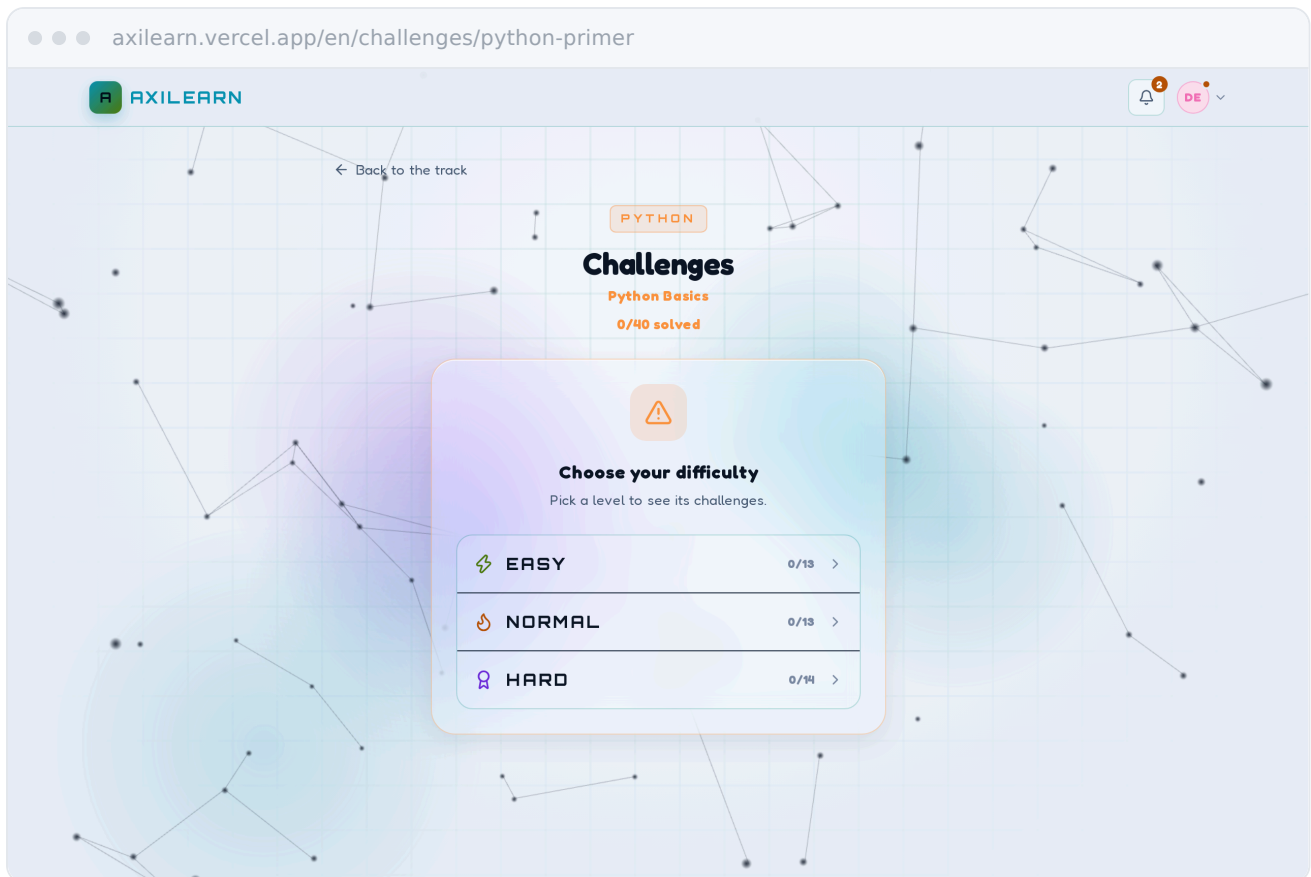

- ☐ A Makes the code look tidy
- ☐ B Tells Python which lines belong to the if
- ☐ C Nothing, it is optional
- ☐ D Makes it run faster

Your turn

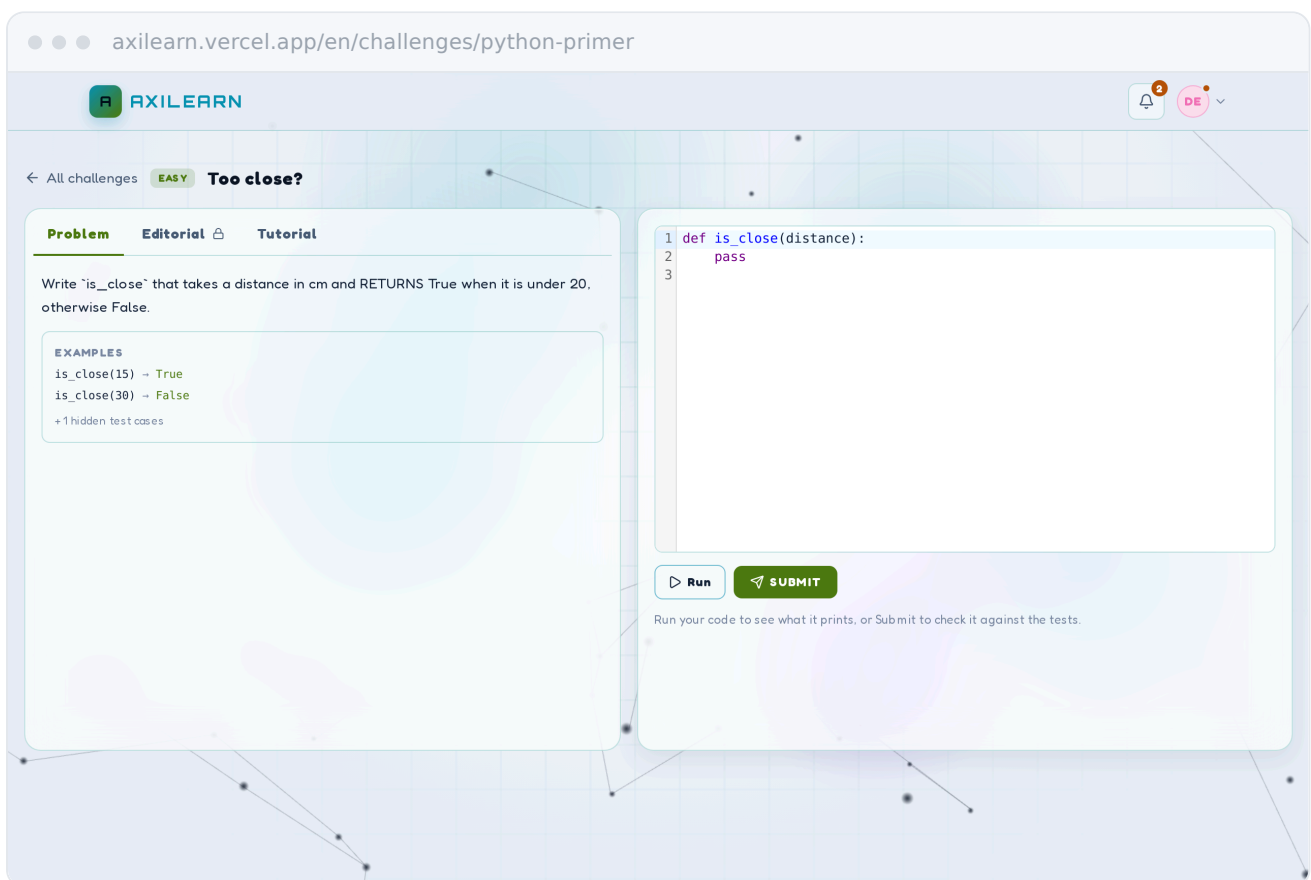

Try the coding exercises for Python Basics.

Not now Start Exercise →

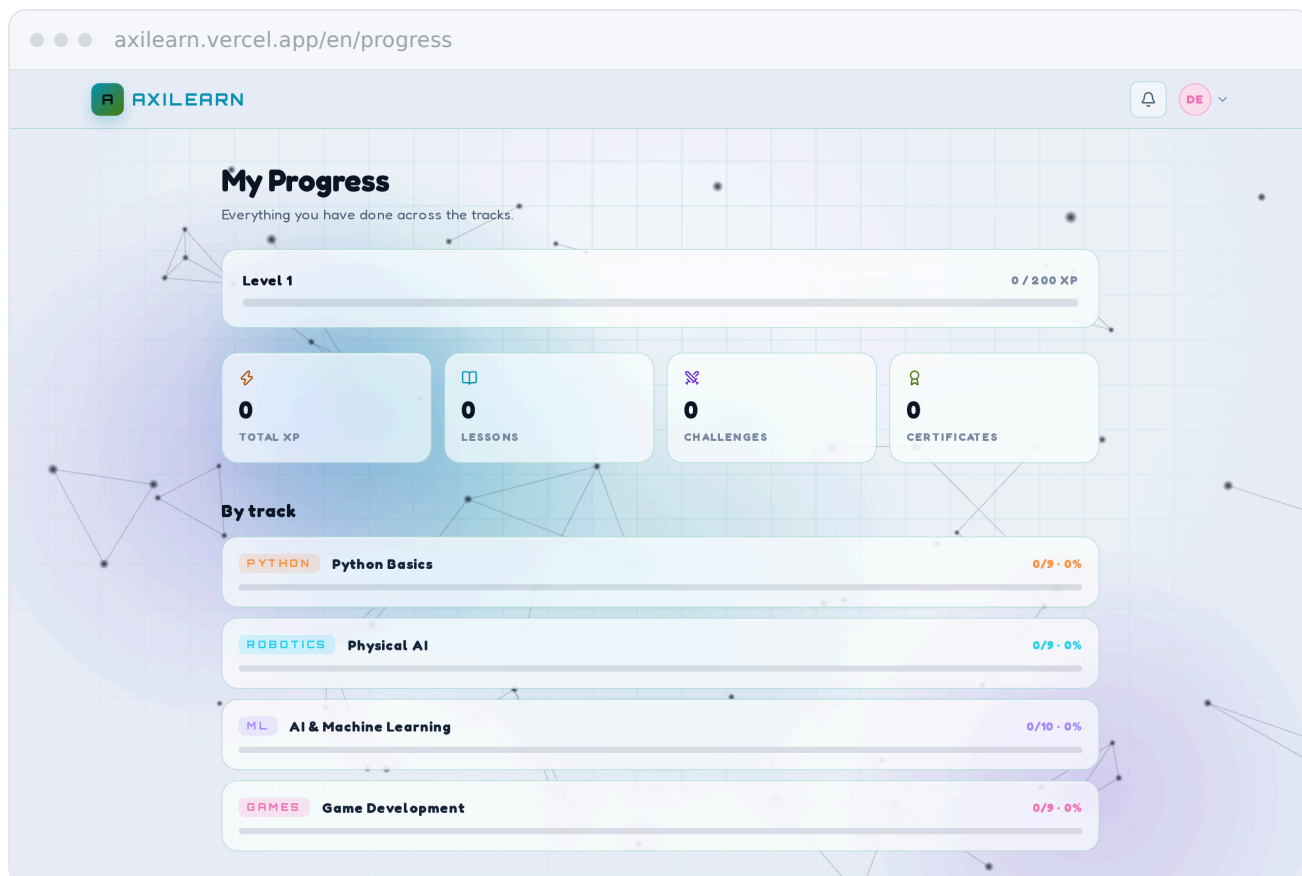

7 End-of-lesson quiz — A short check that awards the XP; a wrong answer explains itself and never blocks progress.

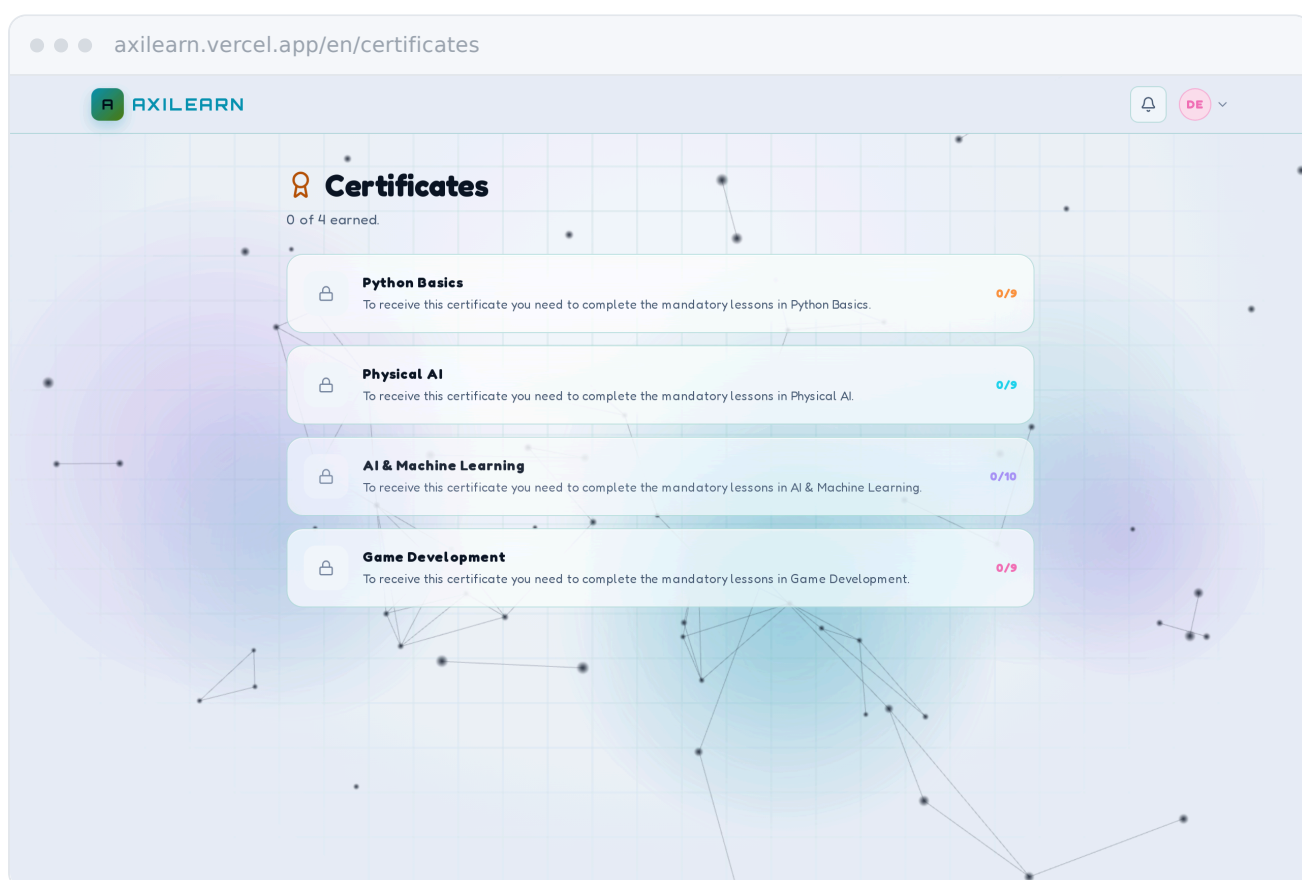

8 **Challenges — pick a level** — Easy, Normal or Hard, chosen before any problem is shown.

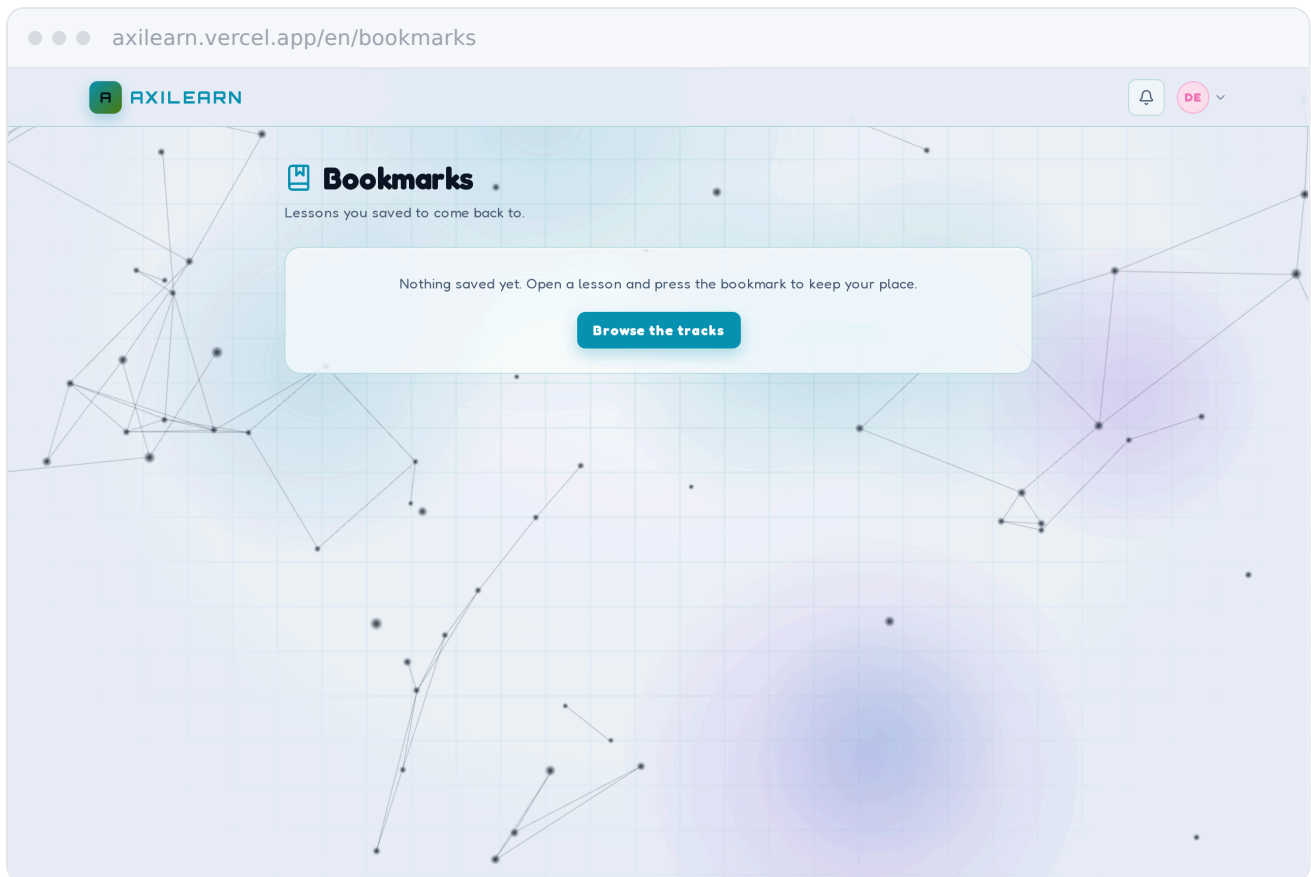

9 **Solving a challenge** — Problem, editorial and tutorial in tabs, with tests run in the browser.

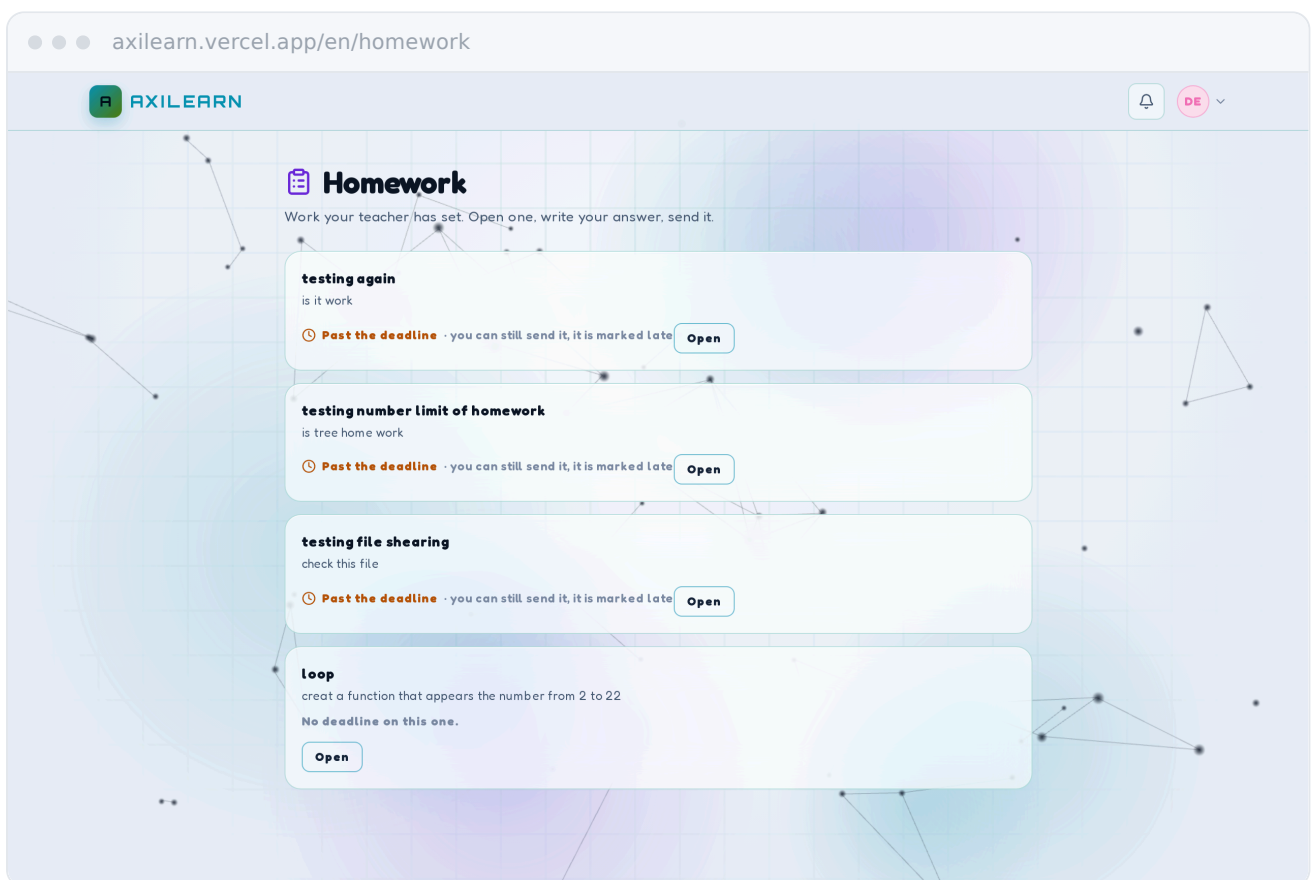

10 **My Progress** — Level, streak, and four real numbers: XP, lessons, challenges, certificates.

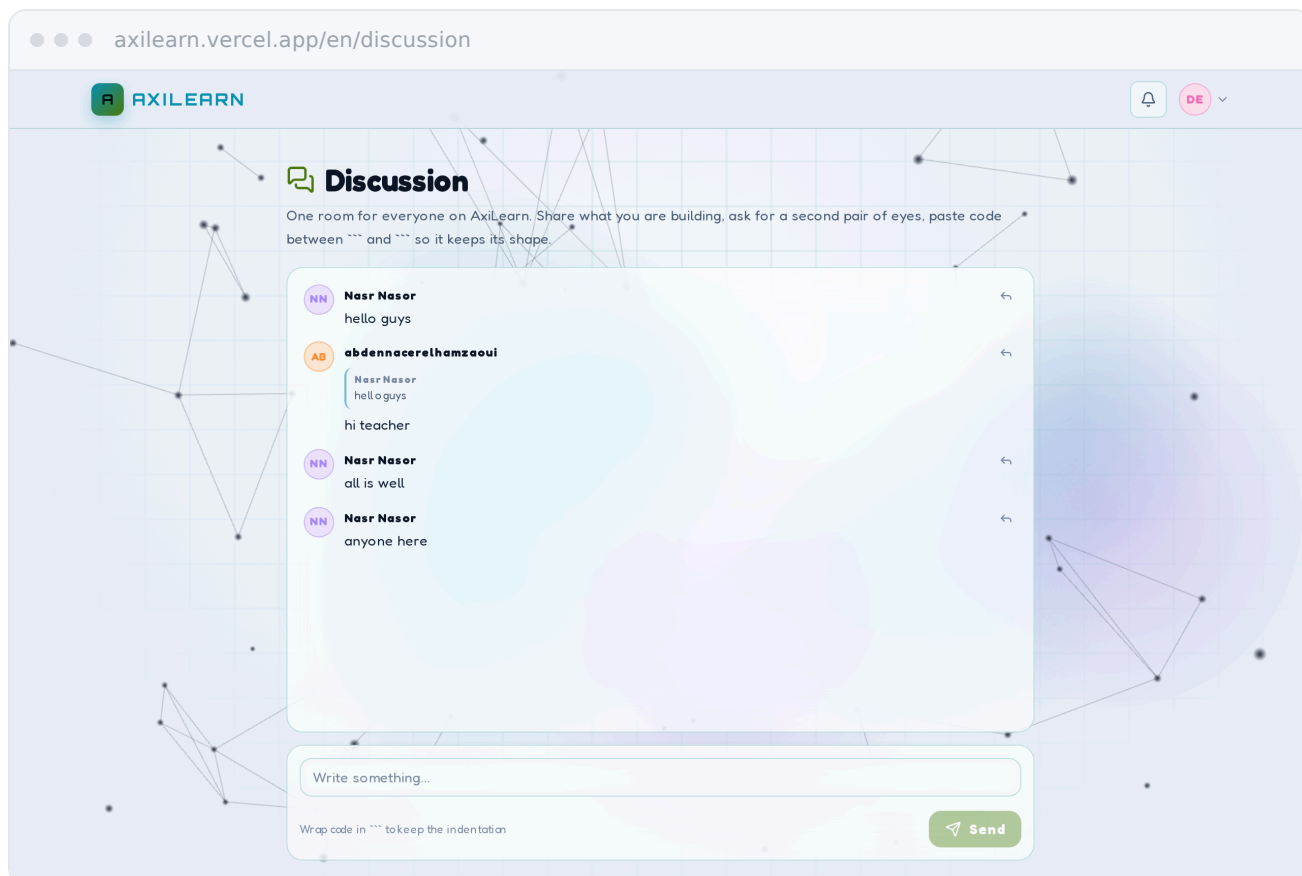

11 **Certificates** — Earned ones open; locked ones say exactly what is left to do.

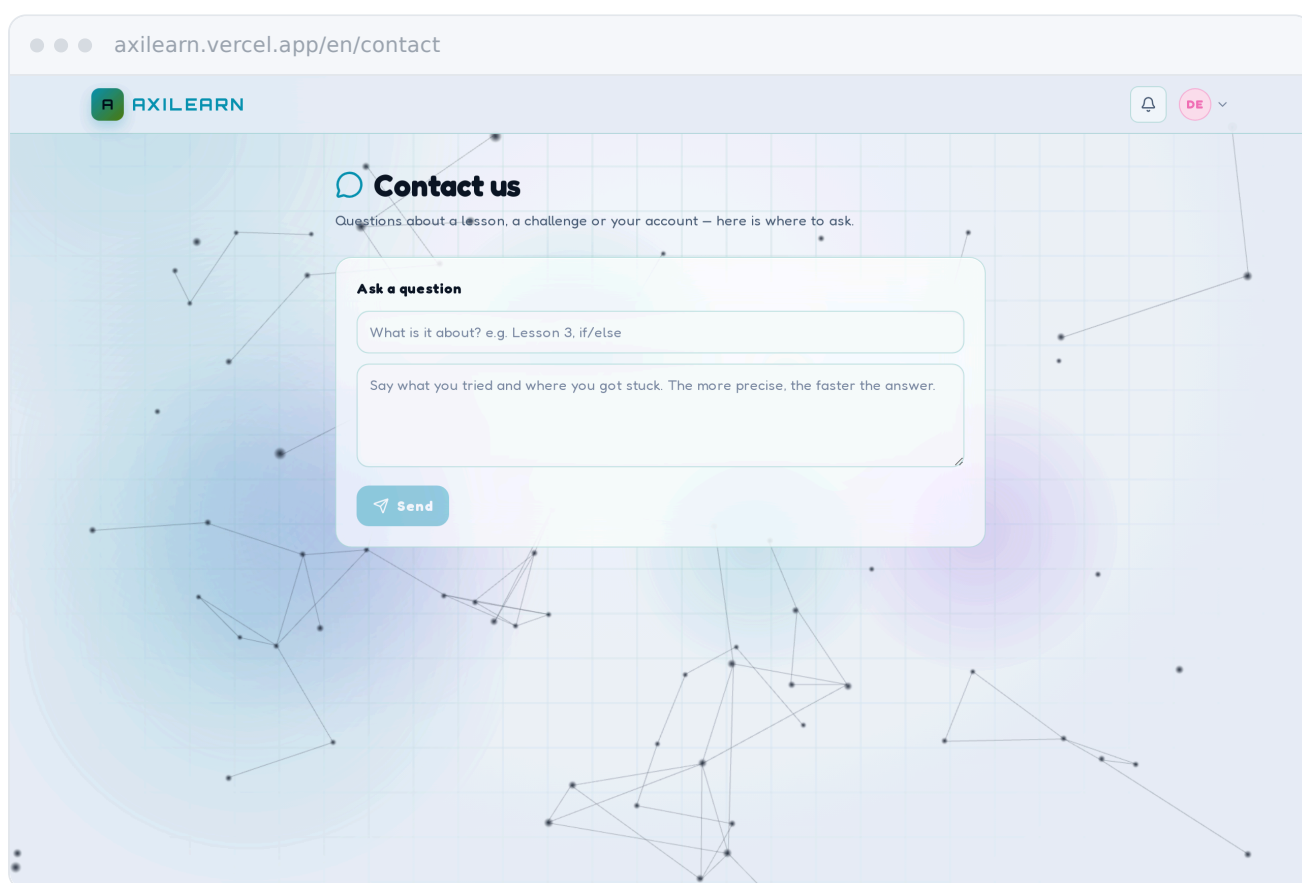

12 Saved lessons — Anything the student starred, to come back to.

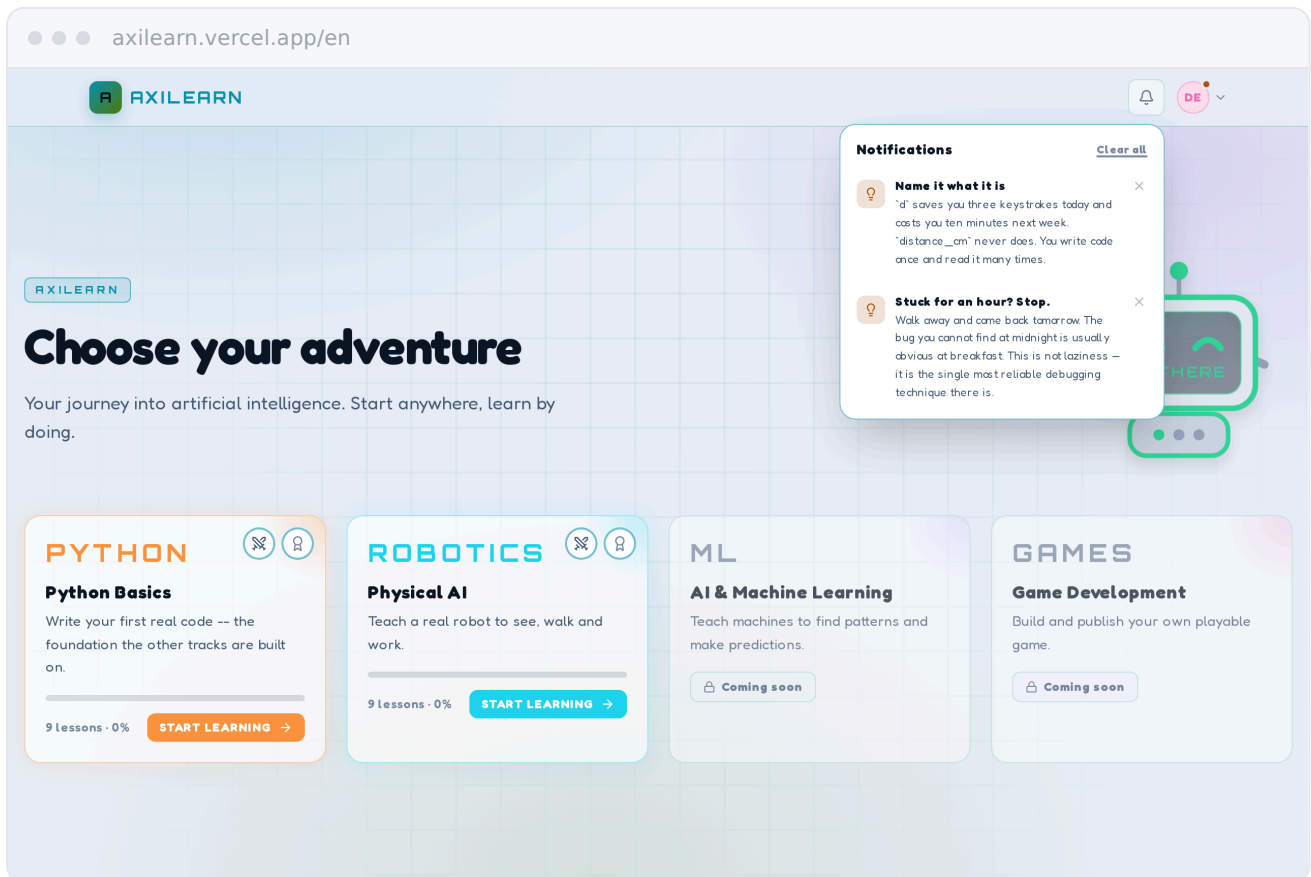

13 Homework — What the teacher set, the deadline, and the answer sent back.

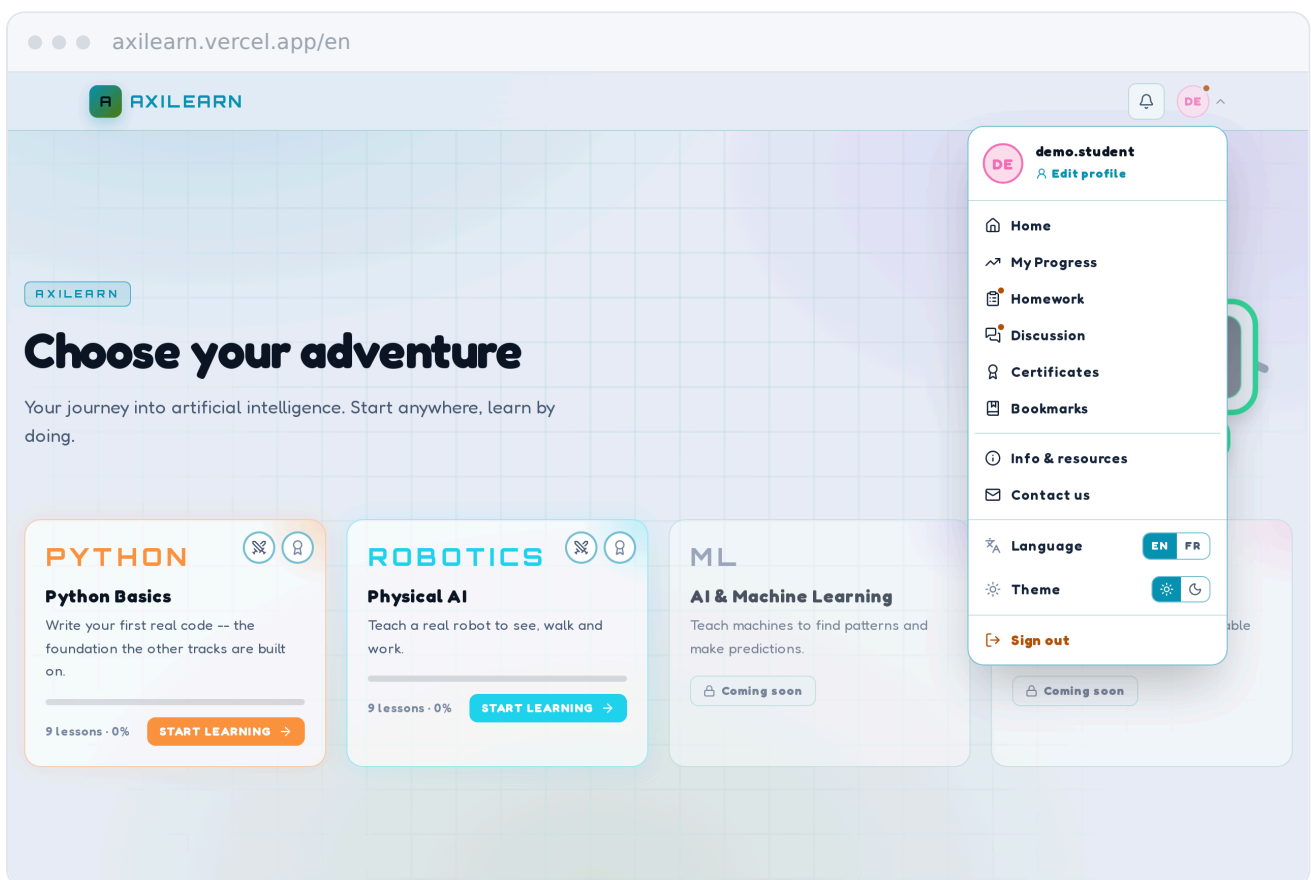

14 Discussion — One shared room for the whole platform, with replies and pasted code.

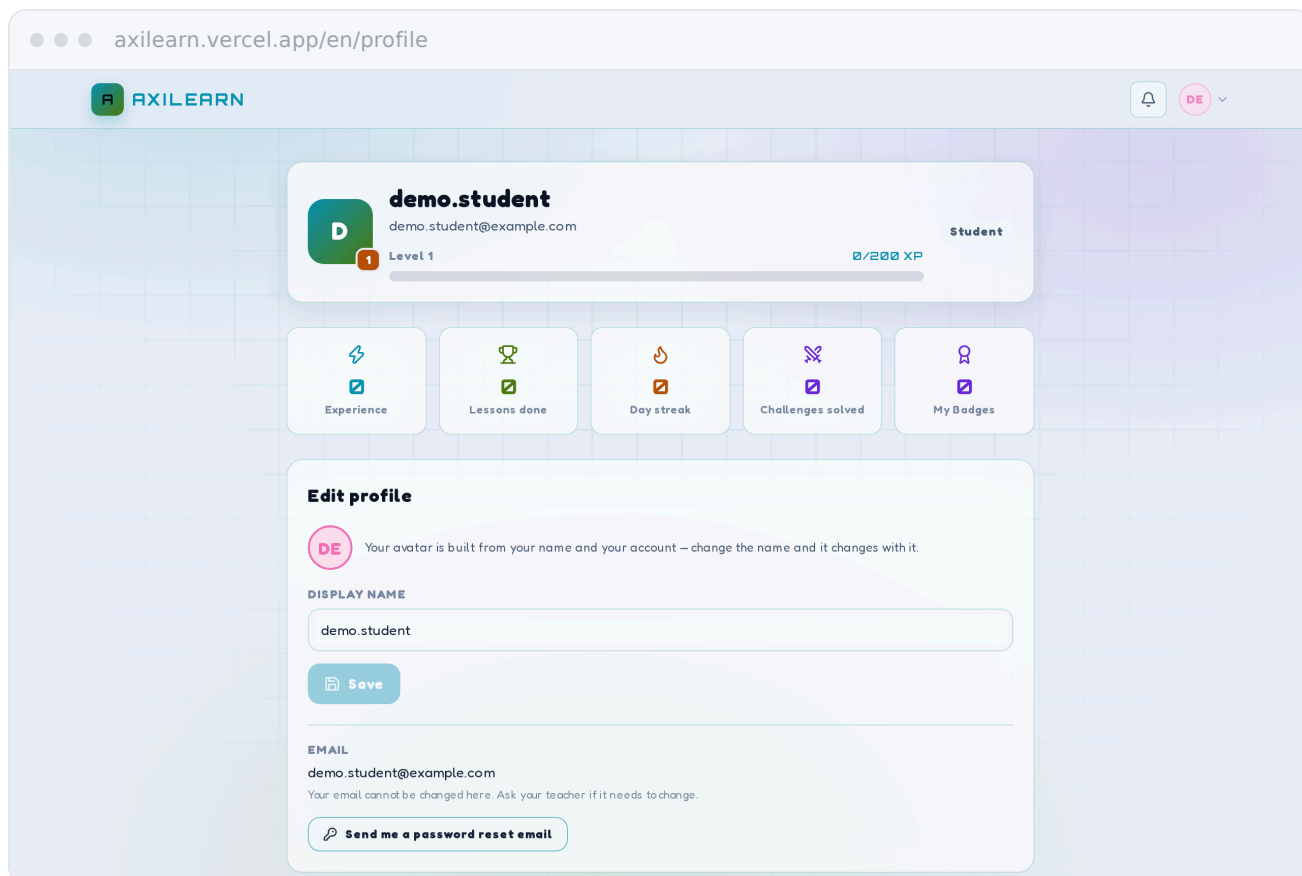

15 Ask the teacher — A private thread between one student and the staff.

16 **Notifications** — A daily tip, plus anything waiting on the student. Open the bell.

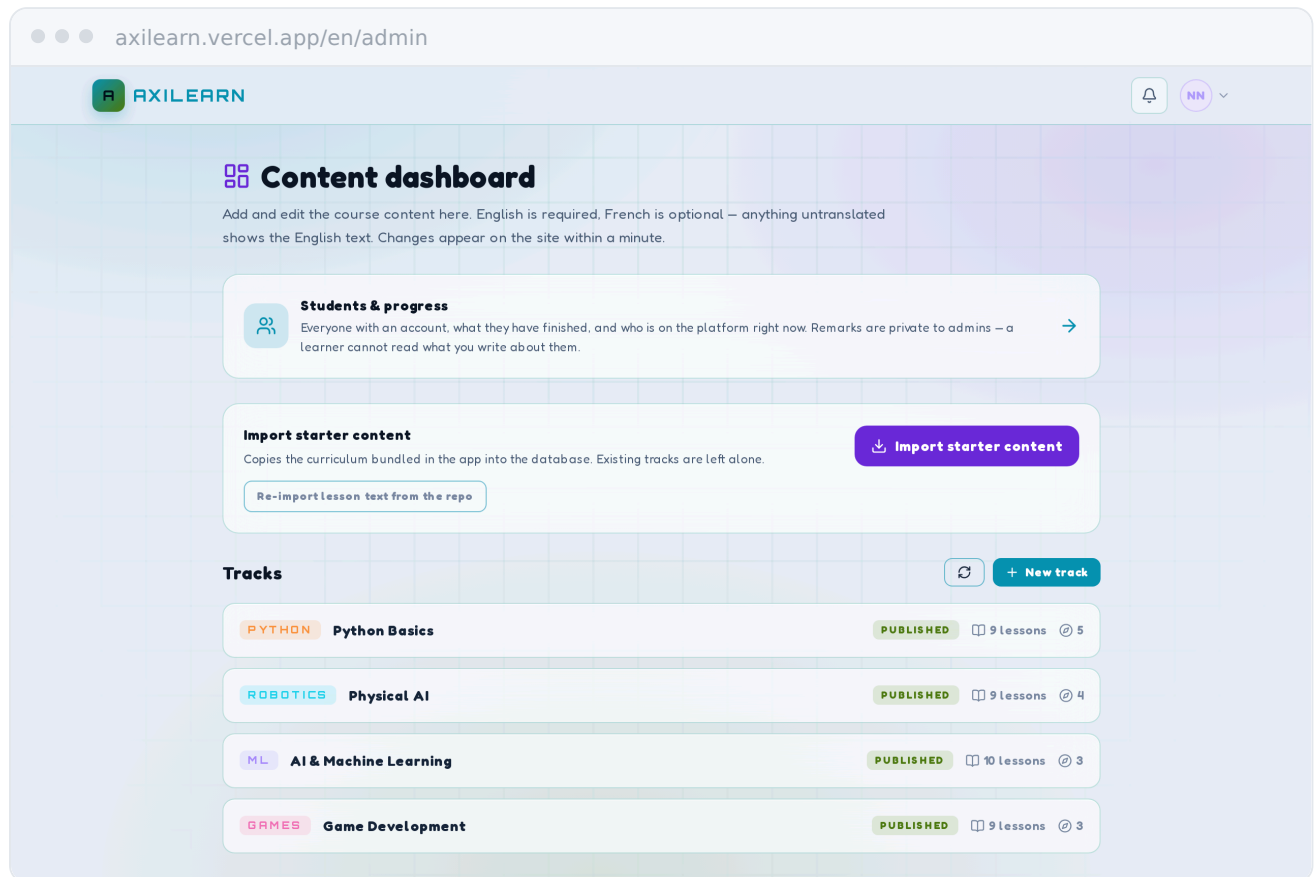

17 **The account menu** — Everything reachable from one place. Open the avatar menu.

18 Profile — Badges, certificates, and the name and password the student can change.

FOR THE TEACHER

Writing the course, setting work, and seeing who is keeping up.

19 Admin dashboard — Every track, its size, and whether students can see it.
